

Industrial Construction Readiness

NPCC Canada supports project teams across Alberta, Saskatchewan, and British Columbia. Our delivery model connects engineering documentation, work packaging, and field resources. We support capital projects, shutdowns, turnarounds, fabrication yards, and remote sites.

Core Capabilities

- Detailed piping, mechanical, structural, and equipment layout drawings
- Plant 3D modelling, piping isometrics, spool drawings, weld maps, and BOMs
- Advanced Work Packaging, Installation Work Packages, and constraint management
- Workforce coordination based on role, training, and site requirements
- Redline, as-built, QA/QC, HSE, scheduling, and field execution support

Regional Focus

Alberta: oil sands, SAGD, pipeline, refinery, petrochemical, and maintenance.

Saskatchewan: mining, processing, heavy industry, shutdown, and turnaround support.

British Columbia: LNG, pipeline, fabrication, industrial facilities, and remote projects.

HSE & Quality Approach

Requirements review for safe, verifiable execution

HSE Requirements Review

- Company certification status must be confirmed during procurement
- Applicable provincial and site requirements identified for each scope
- Client-specific orientations, hazard controls, and reporting protocols
- Role credentials and site-specific training verified where applicable
- Safety requirements integrated into work packages and mobilization planning

Quality Assurance

- Documented engineering and construction procedures
- Drawing reviews, field verification, and controlled redline workflows
- Inspection routines, checklists, and role requirements for QA/QC personnel
- Turnover requirements established before execution
- Lessons-learned and continuous-improvement process
